# Guide to Experts in Forestry and Natural Resources

USDA  
NAT'L AGRIC LIBRARY  
2003 AUG 18 PEG 21  
JOURNAL OF FORESTRY

The Forest Service's mandate and main concern is reflected in our motto, "Caring for the Land and Serving People". Gifford Pinchot, first Chief of the USDA Forest Service, established our responsibility to manage the forests "for the greatest good of the greatest number of people in the long run." Forest Service employees work toward this goal on national forests, at research stations and in cooperative forestry offices.

With concern about environmental issues on the rise, people need knowledgeable and experienced sources of information on natural resource topics. Forest Service employees have the training and the experience to answer a wide range of important questions about the natural environment.

To help you gain access to what the Forest Service knows, we've compiled a list of experts who work for the Northeastern Research Station. They represent a diversity of scientific disciplines and knowledge—from forestry to sociology, from plant pathology to meteorology, from genetic engineering to economics. Together with other scientists, technicians and administrative personnel, they conduct research aimed at solving forestry problems in the complex Northeast, where extensive forests and vast metropolitan areas exist side-by-side.

To get the answers you need, please call, e-mail or write the experts listed here under each topic. If you need assistance, contact us at Communications, Northeastern Research Station, 11 Campus Blvd., Suite 200, Newtown Square, PA 19073; phone 610-557-4229; email [jgamaledin@fs.fed.us](mailto:jgamaledin@fs.fed.us).

We're looking forward to hearing from you.
